

CUSTOM EXTRUDED PRODUCTS

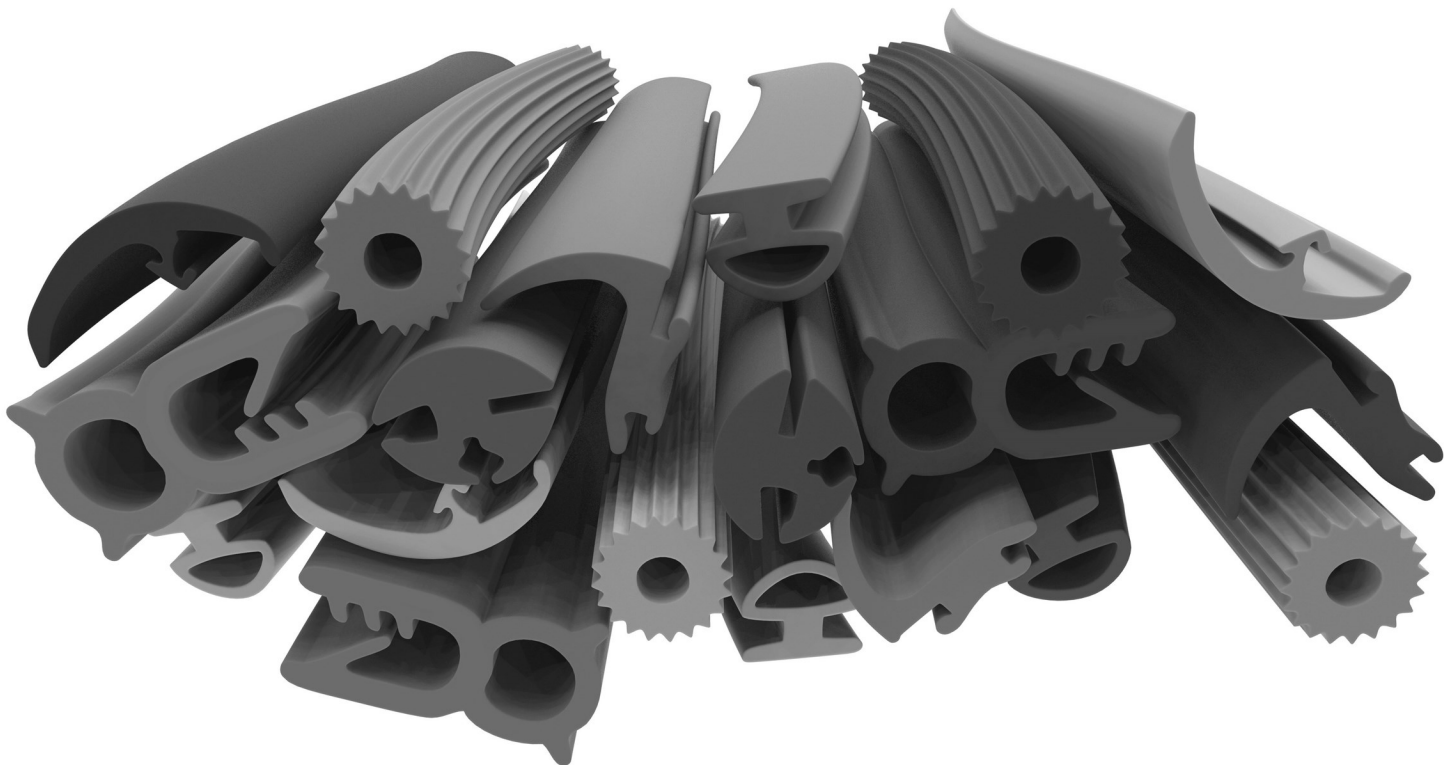

Rubber Extrusion

KLINGER, a global pioneer and leader in gasket sealing technology is expanding into custom extruded products. Rubber extrusion products provide solutions for many functions and markets including OEMs to seal and protect from weather, drown out noise and/or eliminate vibration.

Extruded seals are forced through a precise die under high pressure. Closed cell sponge and dense rubber

extrusions are fabricated using a continuous cure process which provides continuous length large batch productions. Custom seals are manufactured in EPDM, neoprene and nitrile rubbers. We provide intricate profile shapes in various shapes, sizes, colors and materials.

Let us be your supplier for custom rubber extrusion products.
